REGISTRATION: Return form by January 6, 2010

CREDITS

5 BCBA/BCABA Continuing Ed. Credits
 5 CE Credits for Psychologists
 5 NJ Social Work Credits
 5 Continuing Education Hrs for Teacher Certification

Best Practices in Functional Assessment and Developing Effective Treatments for Learners with Special Needs

Functional behavioral assessment is a process designed to identify the factors that maintain maladaptive behavior. A substantial body of literature has shown that these procedures, when used properly, make behavioral interventions both more effective and efficient. Although these procedures are now federally mandated and expected practice in the field, no guidelines for implementation exist. The purpose of the current workshop is to provide practitioners with empirically based procedures for determining the factors that contribute to problem behavior. Suggestions regarding informant methods, descriptive, and experimental methods of functional assessment will be discussed. In addition, strategies for linking assessment results to effective behavioral intervention, such as antecedent and consequence-based strategies, will be described as well.

ROBERT H. LARUE, Ph.D., BCBA, is a Research Assistant Professor at the Graduate School of Applied and Professional Psychology at Rutgers University. He is the Assistant Director of training at the Douglass Developmental Disabilities Center. He earned a dual doctorate in biological and school psychology from Louisiana State University. He completed his predoctoral internship with the Kennedy Krieger Institute at Johns Hopkins University and a postdoctoral fellowship with the Marcus Institute at Emory University. He has co-authored published articles in peer-reviewed journals and presented at national and international conferences. His interests include the assessment and treatment of maladaptive behavior, staff and teacher training and behavioral pharmacology.
